

## **STATUS OF THE 17 M DIAMETER MAGIC TELESCOPE**

### **E. Lorenz for the MAGIC collaboration**

MPI für Physik, München, Germany.

The MAGIC collaboration constructs at present a 17 m diameter air Cherenkov telescope, dubbed MAGIC, for gamma-ray astronomy between 30 GeV and 30 TeV. The telescope is located at the Canarian island La Palma at 2200 m asl. This new telescope incorporates many novel detector elements. The status and progress will be reported. Also some ideas and first developments for a future upgrade will be presented.
