

NEW DEVELOPMENTS IN THE GALPROP CR PROPAGATION MODEL

A. W. Strong (1) and I. V. Moskalenko (2)
(1) MPE, (2) GSFC.

New developments in the GALPROP model for cosmic-ray propagation are described. These include updated cross-sections, 3D and time-dependent options, and stochastic SNR sources. A full nuclear reaction network is included. Results on CR source abundances will be reported here, while radioactive secondaries are reported in an accompanying paper.
