

THE ENERGY SPECTRUM OF MARKARIAN 421 DURING STRONG FLARING ACTIVITY IN 2000/2001

F. Krennrich and for the VERITAS Collaboration

Iowa State University, Dept. of Physics and Astronomy, Ames, IA 50011, USA

.

`krennrich@iastate.edu`

Energy spectra of Markarian 421 will be presented from observations with the Whipple 10m telescope. Strong flaring activity in April-May 2000 and February-March 2001 has yielded a data set with the largest number of photons from this source detected so far by the Whipple collaboration.
