

## **Search for GeV Gamma Ray Bursts at Mount Chacaltaya**

Silvia Vernetto, for the INCA Collaboration  
Istituto di Cosmogeofisica del CNR, Torino, Italy

INCA is an air shower array working at Mount Chacaltaya, Bolivia, at 5200 m of altitude, searching for Gamma-Ray Bursts in the GeV-TeV energy range. The extreme altitude of INCA and the use of the "single particle" technique allows to lower the gamma ray detection threshold up to few GeVs. In this paper we present the results of a search for GRBs in coincidence with BATSE events in the period 1996 December - 2000 May.
