

GRB observations by SZ2 X-ray detectors

Y. Q. Ma, H. Y. Wang, C. M. Zhang, Y. P. Xu, and Z. Y. Zhang

Abstract. A two-headed X-ray detector system had been built as main part of a GRB monitoring system, and has had successful flight on board of SZ2 spacecraft since 10th Jan 2001. Up to 15 March, about 15 burst events can be recognized as GRBs or Solar Flare events. We will present in this

paper the results of obtained transient events, especially the Gamma Ray Bursts, which are updated in due date.
