Instructions to mount a module inside the test box with the pigtail extenders and the module adaptor card

1. Leave the module **on the storage/bonding jig** and **connect the 2 pigtail extenders of the top side**
2. **Transfer the module on module test box**! Pay attention when passing the bottom hybrid pigtails around the cooling block! **Fix the modules with the 4 screws**. Please use the test box without any mechanical support for the module adaptor board.
3. **Connect the pigtail extender of the lower side**
4. **Connect the module adaptor board** (no mechanics handling it) to the 4 pigtail extender of the module.
5. **Mount the module adaptor jig to the module test box frame.** Tighten the 2 screws to hold the 2 bars of the module adaptors plate.
6. **Leave free all the 4 screws of module adaptor plate**. Module adaptor board free.
7. **Screw the module adaptor with the 4 spacers on the plate**.
8. **Insert and clamp the mechanical part to cover the pigtail extender** on the module test box frame
9. **Put the 2 cover plates of the module test box** to protect the module sides.
